

smarti[®]
Security. Control. Comfort.

innovative

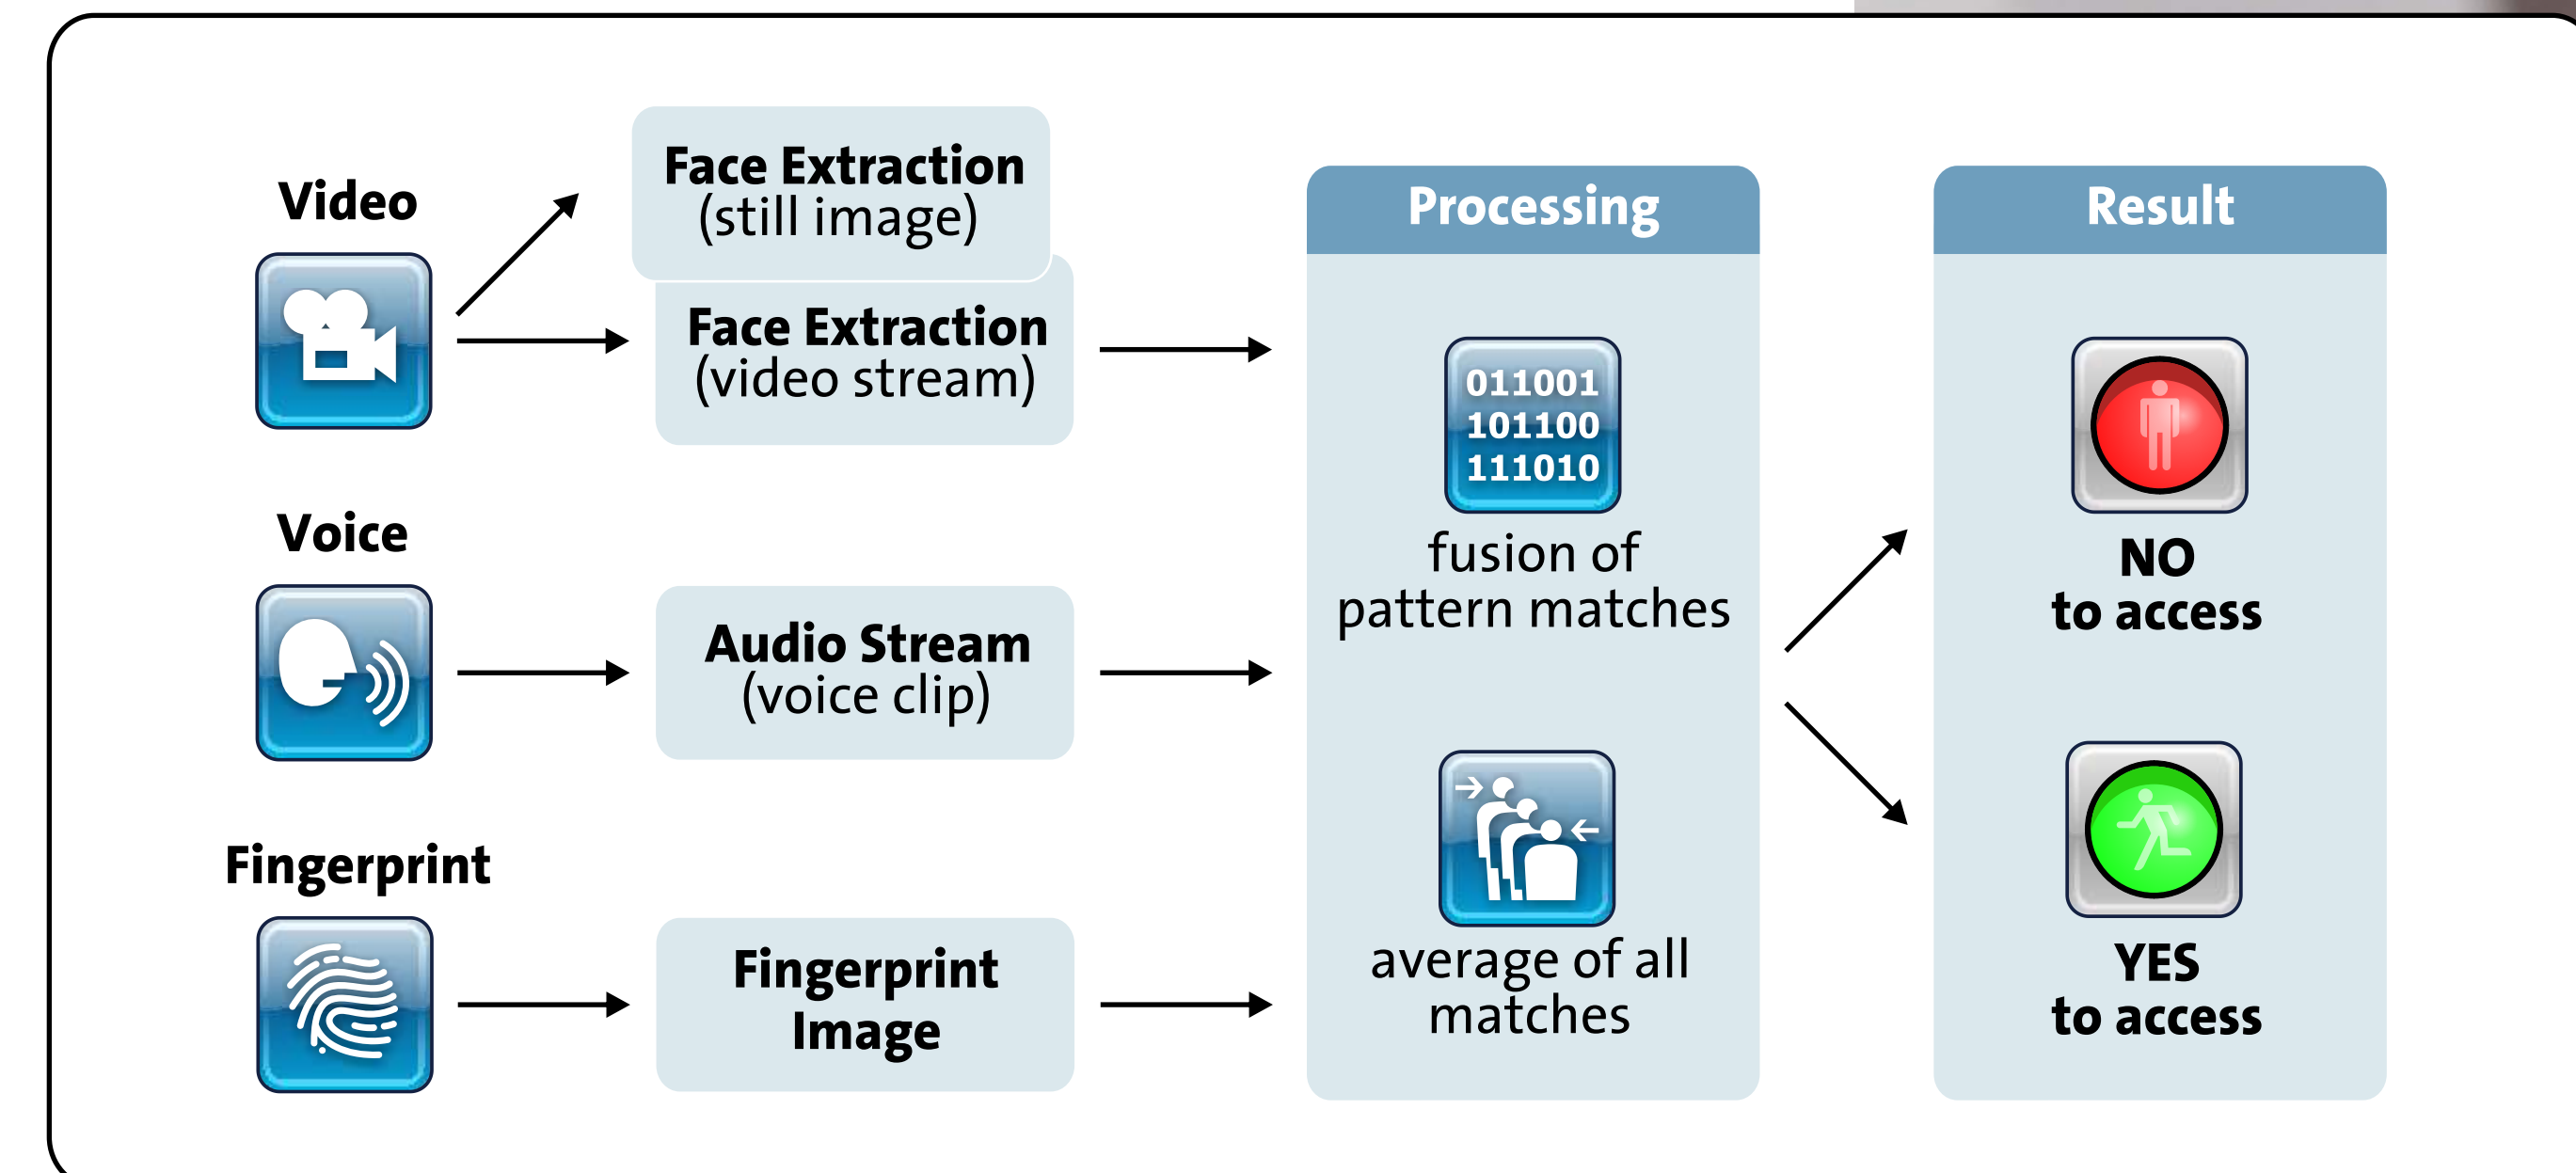

What makes it so **innovative**
and **always** in step with the times?

Access control is increasingly moving toward identification by who you are rather than by what key or card you may carry or PIN you might know. **smarti**[®] is set to meet this challenge. For a high level of reliability, **smarti**[®] recognises people based on several biometric parameters, making it extremely secure.

innovative

Multimodal biometrics is the term used to describe this advanced capability of using more than one biometric identifier to establish an individual's identity (**such as face and voice or face and mimic features**).

This makes the **smarti**[®] a highly reliable multimodal biometric security device and its reliability level can be enhanced even further with the addition of external identification devices like fingerprint or RF ID readers, palm scanners etc.

In addition to the biometric recognition, **smarti**[®] also allows PIN codes which can be entered through the unit's touch screen.
