

Competitive advantages

Access control

- Face and voice biometrics, abuse of cards, PIN codes, keys etc. Is not possible.
- In built IR CCTV camera, records all events to discourage abuse.
- Flexibility of the product allows you to tailor your security level, you can use only the PIN code or only biometrics for low security for medium and high security you can combine PIN + Inbuilt biometric recognition (Face, or face and voice) and you can also attach additional identification readers to the system.
- Protocol independent you can connect practically and electronic device to the system like sensors, identification readers, alarms and other electronic devices.
- Can be integrated into existing systems.
- Additional free "modules" for time and attendance, building management, video intercom and IP phone, video surveillance and messaging mean that you can save money because you do not need to spend money for additional systems which would provide you with these features.

Time and Attendance

- Includes a complete time and attendance system which eliminates buddy punching
- A system which prevents abuse by discouraging it the inbuilt IR CCTV camera, records all events. So even if you use only the PIN code for identification you will be sure that your employees will not abuse the system.
- Touch screen for user interaction and completely customizable buttons. Employees are less likely to press the wrong button because buttons are labelled and only relevant buttons are shown. Less work for the administrator.
- Additional free "modules" for access control, building management, video intercom and IP phone, video surveillance and messaging mean that you can save money because you do not need to spend money for additional systems which would provide you with these features.
- Protocol independent you can connect practically and electronic device to the system like sensors, identification readers, alarms and other electronic devices.

Building automation

- Highly advanced, modern, great looks.
- Biometrics (face and voice) for user identification prevent abuse.
- Inbuilt IR CCTV camera for video surveillance and abuse prevention.
- Protocol independent you can connect practically and electronic device to the system like sensors, identification readers, alarms and other electronic devices. No binding to a specific manufacturer.
- Touch screen user interface.
- Additional free "modules" for access control, building management, video intercom and IP phone, video surveillance and messaging mean that you can save money because you do not need to spend money for additional systems which would provide you with these features.
