smarti@tab-systems.com

smarti® is a complete access control and time & attendance solution based on multimodal biometrics using face and voice recognition. It allows variations in access control to meet any need using a series of user rights.

The main advantage of this great product is the integration of multiple additional features (video messaging, video intercom, video surveillance...) into one compact device for a reasonable price. smarti® is also completely protocol independent and can therefore be used to control almost any kind of I/O device (electronic locks, lights, alarm systems, finger print scanners, magnetic card readers...).

The new Outdoor unit is IP65 compliant, has an aluminium front casing, is in-wall or on-wall mountable, and is equipped with an 8" colour touch screen, integrated camera, a built in LED light, motion detector, microphone, speakers, central processing unit, built in storage, internal memory, communication ports and a relay I/O controller.

The new Spot unit has the same design as the Outdoor unit, it is IP65 compliant but is supplied without the central processing unit, built in storage and internal memory allowing customers greater flexibility and cost effectiveness.
