

Avigilon has introduced its 16 megapixel performance cameras, designed for surveillance applications where detail needs to be captured over a wide field of view, the makers report. Available in colour or monochrome and featuring a CCD image sensor, real-time and post event, user defined digital PTZ, and aperture control and focus of Canon EF lenses, the 16 cameras have the equivalent resolution of more than 50 conventional surveillance cameras, it is claimed. Applications, the company adds, includes ports and airports, and critical infrastructure.

smartis is an access control and time and attendance product based on biometrics, from Slovenian firm **TAB Systems**. The product uses face and voice recognition. Based on pre-recorded biometric samples it recognises a person and then acts according to predefined instructions. It can register an event with a digital photo of an individual, unlock the door, turn on the light send an SMS or an e-mail to a manager. Or, a user can enter PIN codes via the touch screen. Real-time video surveillance is possible over a Local Area Network. The product is protocol-independent and can be used to control almost any kind of device, such as electronic locks, lights, alarms, finger print scanners and magnetic card readers, the makers add.
