Products: Access control, Biometrics

smarti® is a complete access control and time & attendance solution based on multimodal biometrics using face/mimic and voice recognition. An additional advantage of this great product is the integration of multiple additional features like video messaging, video intercom, video surveillance and video phone into one compact device for a reasonable price. smarti® is also completely protocol independent and can therefore be used to control almost any kind of I/O device (electronic locks, lights, alarm systems, finger print scanners, magnetic card readers...).
