**Smarti IFSEC award finalist for the second time in a row**

Trzic, Slovenia

**Smarti, a complete multimodal biometric access control and time & attendance solution, has been short-listed for the IFSEC Security industry awards in the best new access control product category for the second successive year.**

smarti Castor

Last year the smarti Alcor unit was among the 6 finalists and this year the BSIA (British Security Industry Association) short listed the new smarti Castor unit among the 6 best new access control products for the year 2007.

An additional advantage of this product is the integration of multiple additional features like video messaging, video intercom, video surveillance and video phone into one compact device for a reasonable price. Smarti is also completely protocol independent and can therefore be used to control almost any kind of I/O device (electronic locks, lights, alarm systems, finger print scanners, magnetic card readers...).
