

## IFSEC 2008 has global appeal

CMP Information is pleased to announce that 30,753\* (subject to ABC audit) attendees visited IFSEC 2008, when it took place from 12-15 May 2008 at the NEC, Birmingham, UK. The world's largest annual security event attracted visitors from a range of blue chip companies including ASDA, Barclays, Coca-Cola, Merrill Lynch, American Express, Next, DHL, Mothercare, Cadbury Schweppes, and Credit Suisse. Over 30% of the show's audience was international, from countries including France, Spain, Russia, China, Japan, Italy, Australia and the USA.

As well as providing visitors with a wide variety of the latest products and services to hit the market, IFSEC 2008 also presented a comprehensive conference programme for the first time. The IFSEC Conference 2008 tackled the issues of border security, transportation security, surveillance and protection, major incident management and response, within niche, focused sessions for key industry sectors.

IFSEC 2008 also included a number of brand new feature areas including "A Day in the Life of a Smartcard" and the IP Innovation Centre.

IFSEC 2009 will take place from 11-14 May 2009 at the NEC Birmingham, UK and already promises to be bigger and better than ever before. For the latest event information please visit [www.ifsec.co.uk](http://www.ifsec.co.uk)

THE MEETING PLACE FOR THE SECURITY INDUSTRY

Companies interested in exhibiting at IFSEC 2009 should contact Charlie Cracknell on +44 (0)20 7921 8069 or email: [ccracknell@cmpl.biz](mailto:ccracknell@cmpl.biz)

IFSEC India 2008 will take place from 16-18 October 2008 at Pragati Maidan, New Delhi, India, alongside new event, Flex India. For more information or to register for free entry, please visit [www.ifsecindia.com](http://www.ifsecindia.com)

## A new solution for your security needs

Concept Smoke Screen generators are incredibly powerful security smoke systems.

Smoke Screen is designed to remove the primary sense of sight and in doing so defend property and defeat intruders and burglars. They pride themselves on excellence in service for both manufacture and installation of market leading security systems.

Concept Smoke Screen has pioneered unique and unsurpassed techniques such as ducted smoke systems, OEM installations (for instance building smoke generators into cigarette gantries) and stand alone systems.

Their products complement both the most advanced alarm system and security installations world wide as well as less complex, entry level systems.

Aside from security, they get involved in some of the most technically demanding applications of simulant smoke. Past projects include working with the Fire Brigade, the Royal Air Force, the US Navy and an Atomic Weapons Establishment.

Since then Concept Smoke Screen techniques and processes have evolved to produce the best possible simulant machines available. Concept Smoke Screen have the most relevant

accreditations of any security smoke provider currently on the market.

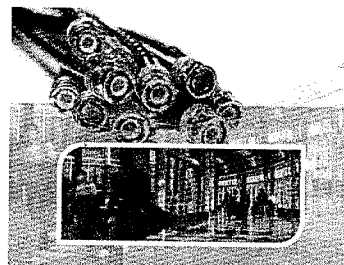

You can find out more about their award winning credentials and see why Concept Smoke Screen is the industry leader on their website: [www.smoke-screen.co.uk](http://www.smoke-screen.co.uk)

## Expanded horizons for networked video

Veracity has developed a family of innovative products to support IP Video projects. These solve practical problems in IP Video system design and deployment. Veracity focuses on transmission, storage and display solutions, particularly for high-bandwidth mega-pixel IP camera systems.

Based in the USA and the UK, the Company has established a strong reputation in the global market for its products, via both direct sales and as a supplier to OEM partners. We supply an extensive range of transmission solutions, time synchronization and solid-state analogue and digital video recorders.

Cables in an Ethernet network are limited to 100 metres in length, but frequently network equipment must be connected over greater distances. Our newest product, OUTREACH, lets you overcome this restriction with a single, simple device. OUTREACH doubles, triples or even quadruples the normal 330ft (100m) CAT5 cable run length for 100BaseT networks. It forwards both Ethernet and PoE for another 330ft (100m) using a patent-pending

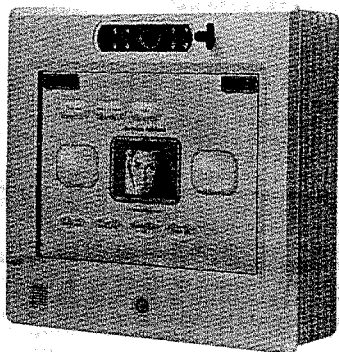

power-processing scheme, and multiple units can be employed in series for even longer distances, with no degradation in network speed or latency.

## smarti® is an IFSEC Awards finalist for the third time in a row!

At the beginning of this year, TAB Systems Inc launched a new complete multi-modal biometric unit for access control, time and attendance and building management called smarti® DIADEM. The new unit has already received its first international award. It has been short-listed by BSIA (British Security Industry Association) as one of six best new access control products for the IFSEC 2008 Security Industry Awards. smarti® is to our knowledge the only product nominated for this prestigious award three times in a row. We are very proud of this nomination and the recognition of smarti® as a leader in its field.

Access control is increasingly moving towards identification by whoever you are (face and voice recognition) rather than by what key or card you may carry or PIN you might know. smarti® is set to meet this challenge. The biometric information about an individual is saved as part of a swift enrolment process. smarti® uses this information to recognise a person and then acts according to pre-defined instructions that the system controller sets up. These might include saving a photo of the person in the event log, and then opening a door, turning on a light, sending an email or SMS etc, or a combination of such actions. The new DIADEM unit is fan-less for

quiet operation.

## Fastcom Technology introduces secure virtual barrier for barrier-free access control

Fastcom Technology, a leader in high security anti-tailgating and single person detection solutions, has announced the availability of the world's first secure virtual barrier. The SMACS eEntry makes it possible to secure access to a building or restricted area without the use of physical barriers and cards.

The eEntry leverages the Fastcom SMACS single passage control system to ensure that only one person at a time passes through the secure virtual barrier, while the identity of those passing through the secure virtual barrier is verified by the VisionAccess 3D Face Reader from Bioscrypt, the enterprise access division of L-1 Identity Solutions, a leading provider of identity solutions and services.

The secure virtual barrier prevents unauthorised personnel from jumping over turnstiles. It is ideal for locations that are too small to accommodate

physical barriers or for organisations that want to present an inviting and open atmosphere while maintaining a high level of security.

The 3D face readers are mounted in the virtual area of the eEntry barrier and will trigger an alarm if someone attempts unauthorised entry, enabling Fastcom SMACS, for example, to shut automatically an access door a certain distance after the secure virtual barrier.

## New SME access control product

Ablo UK introduced a host of new products at IFSEC, including an access control product specifically aimed at SMEs.

Suitable for smaller sites, Smartair is an offline access control system, designed for any installers who are not specifically access control specialists. Radio Frequency Identification contact-less chip technology in the reader and card means the system is durable and requires minimal maintenance.

Ablo UK says it can be fitted to internal or external doors with contemporary design, stainless steel construction and compatibility with a variety of handles and mortice locks.

The Ablo UK stand also hosted a diverse range of its other new products including: Vega cabinet locks, EL490 and EL590 electric motor locks, DA460 door operator, EL520 Exit Kit - an EN1125-compliant mortice lock and panic bar combination, and the Protec Cliq, a mechanical cylinder lock offering

physical security with electronic encryption and audit trail.
