

Diadem unit launched

25 Feb 08

TAB Systems Inc has launched a new 'smarti' unit called Diadem.

Smarti is a solution for access control, time and attendance, and building automation. It identifies people through face and voice recognition rather than what ID card or key they carry.

The new Diadem unit is fan-less for quiet operation. It has an aluminium front casing which is IP65 compliant and is meant for indoor and outdoor use.

It is in-wall or on-wall mountable, and the inbuilt IR CCTV camera and IR LEDs provide reliable identification in all lighting conditions.

The unit is also equipped with an eight inch colour touch screen, motion detector, microphone, speakers, Intel Centrino processor, built-in storage and internal memory.
